

SERIAL CLONER 2.1

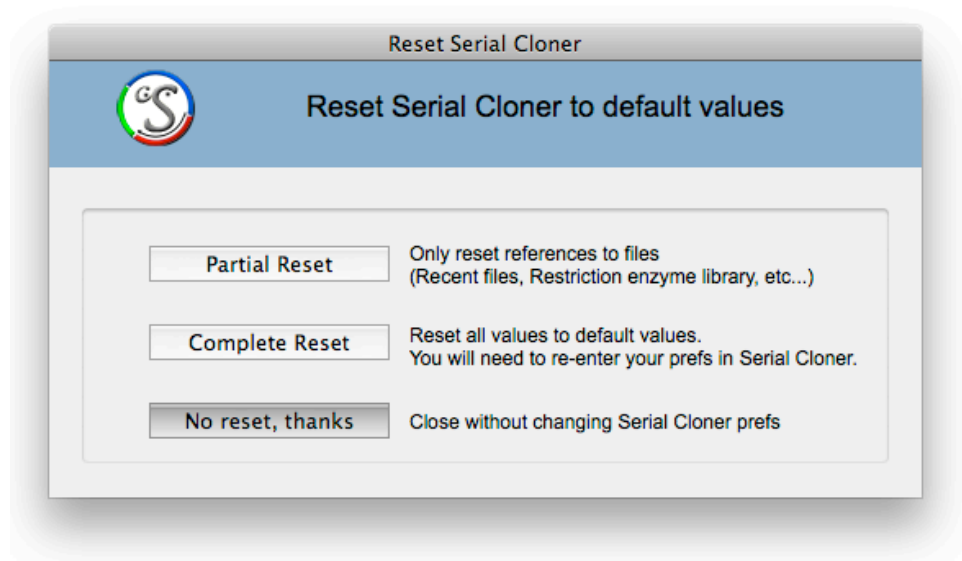

May 2010

Companion Software

Serial Cloner now comes with two companion software (MacOSX version) or one software (Windows version). They can be found in the Companion Software Folder.

- **Reset Serial Cloner :**

This little application has been developed to allow users to reset certain preferences of Serial Cloner. In some cases (fortunately only rarely, but it so far this prevented me from debugging it) the preference file gets corrupted and this provoke crashes upon booting Serial Cloner. To solve this, it is enough to reset preferences. In general, a partial Reset will be sufficient to correct the problem.

- **MacVector Converter (Mac Only)**

This is a Drop-in application that has been developed by Davide Cittaro (<http://sites.google.com/site/davidecittaro/>) and I am really grateful that Davide allowed me to provide Serial Cloner Users with this application. To use it, to drop a MacVector formatted file on the software icon. MacVector Converter will then convert the MacVector sequence to a GenBank formatted sequence (stored in a *MacVector Converted Items* folder in your desktop). This GenBank file can then be opened using Serial Cloner.
